Area Sales Manager

Dear Sir,

This has reference to your verbal request to the undersigned for a feedback on the use of 'Ramco Plastering Compound' in our housing project at 'Anugraha' Vengaivasal Chennai.

We have used Ramco plastering compound extensively for masonry & plastering works in our above referred project consisting of 57 dwelling units.

Advantages experienced in application of the product are enumerated as follows:

1. Workability was found good in masonry & plastering work.
2. We have found less hairline crack in plastering as compared to the surface plastered with regular OPC / PPC mortar.
3. Handling of bag is easier since the weight is 40kg.
4. Presence of hydrated lime goes well with bonding.
5. Consumption of cement content appears to be same for 40kg bag as compared to regular 50kg OPC / PPC bag.
6. Cost of the product is less compared to OPC / PPC application.

In view of the above advantages, we recommend use of 'Ramco Plastering Compound' for masonry work in construction projects.

Thanking You,
Yours Faithfully
