Why HW Tile Grout - Epoxy?

COLOURS TO MATCH ANY TILE

Every tile needs a joint it can count on and a colour it can match with, to tell the right story. The HW Epoxy Tile Grout brings precision, polish, and long-term protection to every joint and tile. It is formulated to withstand continuous contact with water, heat, chemicals, and stains, thus making it the smart, sealed choice for bathrooms, kitchens, hospitals, pools, and more. Available in wide range of colour shades.

WATERPROOF

Forms a dense, non-porous joint that improves water blocking, resisting seeping behind the tiles while preventing stains, cracks and mould.

WEAR RESISTANT

Built for high-traffic, high-impact use. It doesn't chip, fade or weaken under repeated cleaning or heavy footfall.

40+ COLOURS

Available in an extended colour palette on demand, from soft neutrals to rich tones for an exact match or creative contrast.

CHEMICAL RESISTANT

Resists harsh cleaners, oils and acids. Ideal for hospitals, restaurants and areas with constant chemical exposure.

SMOOTH & TRUE

Smooth epoxy finish stays clean, even-toned, prevents efflorescence, and retains colour-consistency with no chalking, powdering, or haze.

POT LIFE

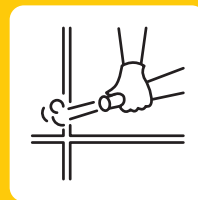

CURING REQUIRED
SAVES TIME

COMPATIBLE WITH ALL
TILE TYPES

APPLICATION

Clean the tile joints with an air blower.

Mix both components to a homogeneous mix.

Use a low speed blender.

Apply with a putty blade.

Fill joints within one hour of mixing.

Clean the tiles with a sponge.

Wipe excess grout immediately. Clean with soap oil.

Scan to watch Application Video.
